

AED devices in our district buildings

Each year, 7,000 young people are lost to sudden cardiac arrest. Our AEDs are easy-to-use automated external defibrillators (AEDs) with voice prompts to walk users through the simple steps necessary in life-saving defibrillation and CPR. Defibrillation within three minutes of sudden cardiac arrest increases the chances of survival to 70 percent. Shock within one minute of collapse raises the survival rate to 90 percent. <http://www.cardiacscience.com/>

Forest Lake School District this school year has replaced the soon-to-be outdated AED devices in all district buildings.

Linked below are two YouTube videos from Cardiac Science, giving demonstrations on the AED as well as the CPR feedback accessory.

Here is the link to the Demo video for the new AED. It is about 5 minutes long.
